Introduction

[Place here an introduction text. This should simply outlay the purpose and content of this document.]

Requirements [if applicable]

[List here the requirements for the application, i.e. MMBase Core version, Required software, JDK versions, supported application servers, or required applications. Remove this paragraph.]

Basic Requirements [if applicable]:

- MMBase Core Version [1.7] or higher
- JDK version [1.3] or higher
- [supported application servers]
- [supported database servers]

Additional Requirements [if applicable]:

- [required java libraries, i.e. Xalan, Jakarta Commons libraries or Log4J]

- [required tertiary software, i.e. ImageMagick]
- [dependency on other MMBase application, i.e. Dove, Editwizards, or Taglib]

Files and Resources [if applicable]

[List here, for each 'set' of files, all files included in this application. Remove this paragraph.]

[file set, i.e. Jars, Templates, Application, Configuration]:

- **[File or resource name, including pathinfo if applicable. can contain wildcards].**

[Basic description of the file or fileset]

Installing [file set, i.e. Jars, Templates, Application files]

[Place here a text describing where the files go. Use a list if the files go different places, or to give suggestions for files whose location can be configured.]

- **[filename].**

[suggested location]

Setting Up the System

[Place here a text describing what other changes to the system are needed (i.e. adding resources to an application server, setting environmental variables etc.). Use separate sections if the changes differ for various software (i.e. configuring resources in application servers)]

Setting Up [platform/application server]

[Place here a text describing changes for a specific platforms]

References

Place here a list of references to other documents, such as configuration.
